Rescue Training Manikins are professional equipment used to simulate and practice emergency rescue and medical treatment. These models are usually made of high-quality materials, based on realistic human structure and function, and can imitate real injuries and physiological reactions. Their designs include adjustable joints, simulated wounds, and built-in physiological feedback systems, which are intended to help rescuers and medical personnel become familiar with various first aid techniques, rescue procedures, and the ability to respond to emergencies during training. By using these models, rescuers can practice in a close-to-real environment, improve their operating skills and emergency response capabilities, and thus respond more effectively to actual rescue missions.
