According to our (Global Info Research) latest study, the global Research Antibodies and Reagents market size was valued at USD 260.3 million in 2023 and is forecast to a readjusted size of USD 377.6 million by 2030 with a CAGR of 5.5% during review period.

An antibody (Ab), also known as an immunoglobulin (Ig), is a large, Y-shaped protein used by the immune system to identify and neutralize foreign objects such as pathogenic bacteria and viruses. The antibody recognizes a unique molecule of the pathogen, called an antigen. Each tip of the 'Y' of an antibody contains a paratope (analogous to a lock) that is specific for one particular epitope (analogous to a key) on an antigen, allowing these two structures to bind together with precision. Using this binding mechanism, an antibody can tag a microbe or an infected cell for attack by other parts of the immune system, or can neutralize it directly.

A reagent is a substance or compound added to a system to cause a chemical reaction, or added to test if a reaction occurs.

Global research antibodies and reagents market key players include Thermo Fisher Scientific, Merck Millipore and Danaher, etc. The top 3 players hold a share about 40%.
