Abstracts

The global Residential Cooling Meters market size is expected to reach \$ 2223 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

In 2025, global residential cooling meters production reached approximately 9,886 K unit, with an average global market price of around USD 145 per unit. A factory gross profit of USD 39 per unit with 27% gross margin. A single line full machine capacity production is around 220K unit per line per year. downstream demand is concentrated in residential house, apartment and condominium. A district cooling system integrates with a building management system to monitor cooling energy usage in real time to reduce peak electricity demand in a residential complex. Residential cooling meters are specialized devices that accurately measure the thermal energy consumed by chilled water systems in residential buildings, such as apartments and condominiums. They enable fair billing based on actual usage and help monitor energy efficiency, commonly used in district cooling or centralized AC systems.
