According to our (Global Info Research) latest study, the global Residential Trash and Garbage Service market size was valued at US\$ 15764 million in 2025 and is forecast to a readjusted size of US\$ 21219 million by 2032 with a CAGR of 4.4% during review period.

Residential Trash and Garbage Service refers to a comprehensive service specifically designed for households and residential communities, encompassing the regular collection, transportation, sorting, treatment, recycling, and disposal of solid waste. This includes municipal solid waste collection, environmentally sound disposal, resource recycling, and related data management and compliance services. These services are typically provided by government agencies, municipal public service departments, or third-party professional companies, aiming to ensure community health, reduce environmental pollution, improve resource recycling rates, and comply with environmental regulations and sustainable development goals.

With continued global population growth, accelerated urbanization, and changing consumer consumption patterns, the amount of daily residential waste has increased significantly, placing higher demands on efficient and sustainable waste management services. Furthermore, increasingly stringent global environmental regulations, the growing acceptance of the circular economy concept, and the widespread application of smart waste management technologies are further driving the industry's transformation from traditional collection and landfill to resource recycling, waste reduction, energy recovery, and digitalization. Therefore, residential waste and garbage management services are not only an important component of basic public health infrastructure but also a crucial support area for achieving low-carbon living and a circular economy. The

market will continue to expand and develop towards more advanced, green, and intelligent directions in the future.
