Abstracts

The global Residual Current Detectors market size is expected to reach \$ 22980 million by 2029, rising at a market growth of 7.7% CAGR during the forecast period (2023-2029).

Global key players of Residual Current Detector include Schneider Electric, SIEMENS, ABB, EATON and Chint Group, etc. The top five players hold a share over 60%.

Asia Pacific is the largest sale market, has a share about 37%, followed by Americas, and Europe, with share 28% and 21%, separately.

In terms of product type, the type AC RCD is the largest segment, occupied for a share of 40%, and followed by type A RCD, and type B RCD, with share 25% and 20%, separately. In terms of application, household has a share over 50%.

A residual-current device (RCD), residual-current circuit breaker (RCCB) or ground fault circuit interrupter (GFCI) is an electrical safety device that quickly breaks an electrical circuit with leakage current to ground. It is to protect equipment and to reduce the risk of serious harm from an ongoing electric shock.

Every residual current device (RCD) has three basic components - summation current transformer, trip relay and switching mechanism.

The function of the various parts is to detect and to evaluate the residual current and to interrupt the power supply if the residual current exceeds a certain value.

For correct function of an RCD, all live conductors of protected circuit, or at least as

many conductors as necessary for correct appliance function, must pass through the summation transformer.

This report studies the global Residual Current Detectors production, demand, key manufacturers, and key regions.
