## Abstracts

The global Resin-based Barcode Ribbon market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Resin-based barcode ribbon is a consumable for barcode printing, used to print durable, high-resolution barcodes and labels. Compared with traditional resin ribbons, most resin-based ribbons are composed of more than two layers. Because the resin has a high melting point, resin-based ribbon printing is done at high temperatures, and the resulting printed images have very high chemical resistance, heat resistance, abrasion resistance, and are suitable for use in harsh environments. Resin based ribbons are suitable for use with textile apparel labels (e.g. taffeta/satin), high gloss coated materials (e.g. polyester, polyolefin, destructible vinyl), warranty labels, labels exposed to harsh environments (e.g. chemical roll labels, pharmaceutical labels, etc.), as well as industrial and automotive applications.

This report studies the global Resin-based Barcode Ribbon production, demand, key manufacturers, and key regions.
