## Abstracts

The global Resin Based Ribbon market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Resin-based carbon tape, also known as carbon fiber composite tape, is a tape-shaped material composed of carbon fiber and resin matrix. It is a composite material made by stacking high-strength carbon fibers and a resin matrix and heat-curing them. Resin-based carbon ribbons have the following characteristics and advantages: 1. High strength and light weight: Carbon fiber has high strength and stiffness while being lightweight, giving resin-based carbon ribbons an excellent strength-to-weight ratio. 2. Corrosion resistance: The resin matrix has good corrosion resistance, which makes the resin-based ribbon have good durability in harsh environments. 3. Good thermal stability: Resin-based carbon ribbon has good thermal stability in high temperature environments, and can maintain a low thermal expansion coefficient and high dimensional stability. 4. Electromagnetic properties: Carbon fiber has good electrical conductivity, which makes the resin-based carbon tape have good electromagnetic shielding and antistatic properties. 5. Plasticity and processability: Resin-based carbon ribbons have good plasticity and processability, and can be cut, bent, formed and other processing operations as needed. Resin-based carbon ribbons are widely used in aerospace, automobile manufacturing, sports equipment, building structures and other fields to manufacture lightweight, high-strength, high-stiffness structural parts and parts.
