Abstracts

The global Resin Diffraction Light Guide market size is expected to reach $ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Compared with the glass optical waveguide popular in the industry, resin diffractive optical waveguide technology has three significant advantages. Lightweight. The density of resin materials is only 1/3~1/4 of the density of glass materials, but there is almost no difference in optical performance between the two. Resistant to drops. Resin optical waveguide lenses are more resistant to drops and effectively extend their service life. safety. Resin optical waveguide lenses have stronger impact resistance, greatly improving the wearing safety index.
