### Resin Insulation Dry-Type Transformers

Resin Insulation Dry-Type Transformers is a device that uses electromagnetic mutual inductance to transform voltage, current and impedance. China's annual output of resin-insulated dry-type transformers has reached 10,000 MVA, becoming one of the countries with the largest production and sales of dry-type transformers in the world. Dry transformers are now widely used in power stations, factories, hospitals and other almost all electrical. With the promotion and application of SC(B)9 series with low noise (distribution transformer noise below 2500kVA has been controlled within 50dB) and energy saving (no-load loss reduced by 25%), the performance indicators and manufacturing technology of dry transformers in China have reached the world's advanced level.
