According to our (Global Info Research) latest study, the global Resin Material PBT for Electric Vehicles market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The most important components of electric vehicles (including HEVs and PHEVs) are roughly divided into batteries, power control units (PCUs), and motor/generators. Each of these parts has functions such as control, power storage, drive, and regeneration. These parts are electrically connected with a high-voltage harness with a current between 300V and 600V flowing between them, and a resin material is used for the insulating part of each part. Resin materials contribute to the weight reduction of automobiles while also having insulating properties, so their usage in auto parts is likely to increase as electrification advances. PBT is often used as a resin material because it has constant mechanical properties and chemical resistance in the temperature environment range (-40°C to 140°C) required for automobiles.
