Abstracts

The global Resin Material PBT for Electric Vehicles market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The most important components of electric vehicles (including HEVs and PHEVs) are roughly divided into batteries, power control units (PCUs), and motor/generators. Each of these parts has functions such as control, power storage, drive, and regeneration. These parts are electrically connected with a high-voltage harness with a current between 300V and 600V flowing between them, and a resin material is used for the insulating part of each part. Resin materials contribute to the weight reduction of automobiles while also having insulating properties, so their usage in auto parts is likely to increase as electrification advances. PBT is often used as a resin material because it has constant mechanical properties and chemical resistance in the temperature environment range (-40°C to 140°C) required for automobiles.

This report studies the global Resin Material PBT for Electric Vehicles production, demand, key manufacturers, and key regions.
