Abstracts

The global Resin Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Resin valve, or Plastic valves are valves with high chemical resistance and are used for directing almost all types of fluids. Thanks to their high durability, plastic valves are often preferred especially in systems containing corrosive fluids. In addition, they are long-lasting due to their high impermeability.

Another feature of plastic valves used in acid and chemical transfer lines, especially in the chemical industry, food industry, natural gas lines, ship constructions, paper mills and heating-cooling lines, is their very low-pressure losses.

The plastic type of plastic valves, which offer ease of use with their easy opening and closing, lightness and small footprint, can be PVC-U, PVC-C, PP-H or PVDF.

This report studies the global Resin Valve production, demand, key manufacturers, and key regions.
