According to our (Global Info Research) latest study, the global Resin Vascular Surgery Simulator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Vascular surgery simulator is used to simulate the operation object of medical vascular intervention surgery. The whole equipment is composed of blood circulation simulation system, basic blood vessel and focus blood vessel. Among them, the vascular circulation simulation system is composed of water pump, simulation fluid, return pipe and pressure and velocity sensor to simulate the blood flow status of human body. The basic blood vessel is composed of heart, peripheral blood vessels and local limb segments made of transparent materials, which are used to simulate the vascular access of interventional surgery. The focus blood vessels include coronary artery and common branch blood vessels, which are used to simulate the blood vessel position of human body with pathological changes, and can be connected to the basic blood vessel alternatively. The device of the invention can truly simulate the distribution of human blood vessels, blood flow and lesions, and can be used for medical personnel to simulate the operation of vascular interventional surgery, especially for the interventional surgery training of novice medical personnel, so that they can be familiar with the operation process of this kind of surgery in zero risk and short time. In addition, it can also be used in the research and development of vascular interventional surgery equipment, which can easily verify the practicability of its equipment.
