The global Resins Cast Dry Transformer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Resin Cast Dry Transformer (also known as epoxy resin cast dry transformer) is a type of electrical transformer that uses epoxy resin to cast the transformer's coils and core, improving the transformer's insulation and moisture resistance performance. Compared to traditional oil-immersed transformers, it is more environmentally friendly because it does not require any oil-based materials. It is also safer because it does not leak oil-based materials, reducing the risk of fire and explosion.
