According to our (Global Info Research) latest study, the global Resistance Oxidation Furnace market size was valued at US\$ 8409 million in 2024 and is forecast to a readjusted size of USD 11910 million by 2031 with a CAGR of 5.1% during review period.

Resistance Oxidation Furnace is a high-temperature equipment based on the principle of resistance heating, which converts electrical energy into heat energy through electric heating elements (such as resistance wire or resistance strip), so as to achieve material oxidation treatment under controlled atmosphere. The core structure includes high temperature resistant furnace body, electric heating element and temperature control system, which can precisely adjust the temperature and gas environment in the furnace to meet the requirements of oxidation process.
