The global Resistant Maltodextrin Powder market size is expected to reach \$ 649.6 million by 2030, rising at a market growth of 6.6% CAGR during the forecast period (2024-2030).

Resistant maltodextrin powder, also known simply as resistant maltodextrin or soluble corn fiber, is a type of dietary fiber derived from corn starch. It undergoes a specialized enzymatic process that modifies its molecular structure to resist digestion in the small intestine, allowing it to pass through to the large intestine largely intact. Once in the large intestine, it serves as a substrate for fermentation by beneficial gut bacteria, resulting in the production of short-chain fatty acids (SCFAs) and other metabolites that contribute to digestive health.

This report studies the global Resistant Maltodextrin Powder production, demand, key manufacturers, and key regions.
