Abstracts

Resistive RAM is a type of non-volatile RAM that works by changing the resistance across a dielectric solid-state material, often referred to as a memristor. On power failure, Dynamic RAM loses all its unsaved content, where it is not the case with Resistive RAM.

According to our (Global Info Research) latest study, the global Resistive RAM market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

NVDIMM is a non-volatile solution that combines resistive RAM memory chips with controller and firmware. It delivers superior performance along with instant data recovery in case of power failure. NVDIMMs are most suited for cloud computing, mobile computing, data center, and many more.
