The global Resistive Screen Silver Paste market size is expected to reach \$ 541 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Resistive touchscreen silver paste is a functional material used for printing conductive circuits, frame electrodes, and leads in resistive touchscreens. It is typically formulated with silver powder, resin, and solvents, and is screen-printed to form a low-resistance conductive circuit to lead out ITO signals.

Upstream industries mainly include silver powder, resins/binders, solvents and additives, as well as basic materials such as PET/ITO films, glass, and FPCs. Downstream industries primarily cover touch display applications in industrial control, human-machine interfaces, POS/ATMs, self-service terminals, medical equipment, and instrumentation. The global price of resistive touchscreen silver paste is \$76.8 per ton, with annual sales of approximately 480 tons, a global production capacity of 500 tons, and an industry profit margin of 25%.
