According to our (Global Info Research) latest study, the global Resonance Liposuction Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

When the resonance liposuction equipment works, it emits mechanical resonance waves with the same natural frequency as fat cells, selectively crushes and emulsifies fat cells, effectively protects nerve and blood vessels, and uses negative pressure to suck fat out of the body. The resonance liposuction equipment can suck out the deeply dissolved fat cells out of the body while dissolving fat, which greatly shortens the operation time, significantly increases the amount of liposuction, and the effect is better than that of traditional liposuction.
