## Abstracts

The global Resonance Liposuction Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

When the resonance liposuction equipment works, it emits mechanical resonance waves with the same natural frequency as fat cells, selectively crushes and emulsifies fat cells, effectively protects nerve and blood vessels, and uses negative pressure to suck fat out of the body. The resonance liposuction equipment can suck out the deeply dissolved fat cells out of the body while dissolving fat, which greatly shortens the operation time, significantly increases the amount of liposuction, and the effect is better than that of traditional liposuction.

This report studies the global Resonance Liposuction Equipment production, demand, key manufacturers, and key regions.
