Abstracts

Resorbable membranes for guided bone regeneration are biodegradable materials, typically made from biodegradable polymers or natural biomaterials, designed to facilitate the regeneration and repair of bone tissue. These membranes are used in the medical field, particularly in orthopedic surgery, to provide support and protection, promote the growth of new bone tissue, and when necessary, protect and isolate surrounding soft tissue and bone tissue. Resorbable membranes for guided bone regeneration can be used in various clinical applications such as fracture healing, bone defect repair, implant fixation, and in dentistry. Their purpose is to provide support and guidance in damaged or missing bone tissue areas to promote an effective regeneration and healing process.
