Resorbable Orthopedic Fixation Pin is an implantable fixation device made from bioabsorbable polymers, composites, or magnesium-based materials, used to stabilize bone fragments, cartilage, ligaments, or small orthopedic structures during healing. It gradually degrades in the body, reducing the need for secondary removal surgery and supporting minimally invasive orthopedic treatment.

The industrial chain of Resorbable Orthopedic Fixation Pin covers upstream bioabsorbable polymers, magnesium alloys, composite materials, molding tools, machining equipment, sterilization materials, and testing reagents. The midstream consists of material processing, precision molding, machining, surface treatment, sterilization, mechanical testing, degradation testing, and packaging. Downstream applications mainly include orthopedic trauma, sports medicine, pediatric orthopedics, hand and foot surgery, cartilage fixation, ligament repair, and hospital implant

procurement.
