Abstracts

The global Respiratory Humidifying Equipment market size is expected to reach \$ 856.2 million by 2029, rising at a market growth of 5.6% CAGR during the forecast period (2023-2029).

Global key players of respiratory humidifying equipment include Fisher & Paykel Healthcare, Breas, VapoTherm, Medline, WILMed, etc. The top five players hold a share about 71%. North America is the largest market, has a share about 49%, followed by Europe and Asia-Pacific, with share 31% and 15%, separately.

Respiratory humidification is a process of warming, purification, and humidification of the respiratory gas artificially. The lung tissues start getting damaged due to dryness of the organs when the natural humidification fails. Thus, respiratory humidification is carried out for mechanically ventilated patients. An artificial respiration causes the epithelial mucus layer to become more viscous in a short time, impairing the ciliary function inside the nose. Thus to prevent such complications, the loss of heat and moisture are compensated by the humidification process. The humid air is provided to the nasal mucosa at 37 degrees Celsius (room temperature), with adjusted 100% relative humidity to maintain mucociliary clearance for long time. Respiratory humidifiers are used to heat and humidify the air of patients whose breathing is assisted by a ventilator in Intensive Care Units (ICU). The air must be conditioned to 37°C and at least 90% relative humidity. Over-humidification or under-humidification can lead to blocked airways, lung damage and infection. Respiratory humidifiers find application in healthcare systems in supplying warm moisture along with breathing gases to patients, especially pediatric patients and infants. This is necessary because the natural process of heating the inspired gas by the nasal mucosa during normal breathing is not achieved when providing respiratory support to patients with nasal cannula or mechanical

ventilation. Hence, medical humidifiers, which are high flow, temperature-controlled devices, are used.
