Abstracts

The global Respiratory Pathogen Detection market size is expected to reach \$ 17280 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

Respiratory diseases continue to increase across the globe due to changing climate and environment, thereby increasing the respiratory pathogen testing market. The detection of respiratory pathogens is mainly to assist doctors in the diagnosis and treatment of diseases by detecting microorganisms in patients' respiratory samples, such as viruses and bacteria. The respiratory pathogen detection market has a very broad market prospect. With the continuous improvement of technology and the continuous expansion of the market, the respiratory pathogen detection market will have more opportunities and challenges.

Respiratory pathogen detection refers to methods and technologies for detecting pathogens (such as viruses, bacteria, etc.) present in human respiratory tract samples (such as throat swabs, nasopharyngeal swabs, etc.). The detection of respiratory pathogens can help doctors accurately diagnose respiratory infections, such as influenza, pneumonia, and bronchitis.
