Respiratory Protective Equipment (RPE) is a particular type of Personal Protective Equipment (PPE), used to protect the individual wearer against the inhalation of hazardous substances in the workplace air.

Scope of the Report:

A respirator is an important piece of personal protective equipment and is worn for a variety of different reasons. It is used when an employee must work in an atmosphere that does not have adequate oxygen. It may be required to protect a worker from other respiratory hazards such as dust, airborne contaminants, noxious fumes, etc. Many chemicals that are used today require a respirator to be worn. Safety Data Sheets (SDS) should be accessible to help use the chemicals safely AND serve as protection from any hazardous properties they may have.

The worldwide market for Respiratory Protective Equipment is expected to grow at a CAGR of roughly xx% over the next five years, will reach 5900 million US\$ in 2023, from 5900 million US\$ in 2017, according to a new GIR (Global Info Research) study.
