An electrocardiogram (ECG) is a test which measures the electrical activity of your heart to show whether or not it is working normally. An ECG records the heart's rhythm and activity on a moving strip of paper or a line on a screen.

The increasing number of collaboration among key players for the development and manufacturing of the ECG devices is a trend witnessed in the global ECG devices market. ECG refers to the process of monitoring the heart activity over a period of time. It is the most commonly used test to detect heart diseases and monitor heart activity, while undergoing the treatment of heart diseases, cancer, and other diseases. ECG devices record the electrical activity of the heart to detect any damage to the heart, its positioning, and effects of the drugs on heart. ECG devices have applications in surgical procedures ranging from cardiovascular to cancer.
