Abstracts

The global Restriction Endonucleases market size is expected to reach \$ 478 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Restriction Endonuclease is an enzyme that cuts DNA at or near specific recognition nucleotide sequences known as restriction sites. They are the enzymes that are found in the bacteria and are harvested from them for their use in research and commercial aspects. Restriction enzymes are commonly classified into four types, which differ in their structure and whether they cut their DNA substrate at their recognition site, or if the recognition and cleavage sites are separate from one another.

The Restriction Endonuclease industry is relatively concentrated, and the players mainly come from North America and Western Europe. In the world wide, major manufactures mainly are New England Biolabs, Thermo Fisher Scientific, Takara Bio, Illumina, Agilent Technologies, Roche, GE Healthcare, Promega Corporation, Qiagen and Jena Biosciences, etc, with about 88% market shares.

This report studies the global Restriction Endonucleases production, demand, key manufacturers, and key regions.
