## Abstracts

According to our (Global Info Research) latest study, the global Resulfurized Steel market size was valued at US\$ 1429 million in 2024 and is forecast to a readjusted size of USD 1813 million by 2031 with a CAGR of 3.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Resulfurized steels are free machining steels. This includes steel grades in the 11XX and 12XX series, such as 1215, 12L14, 1117, 1137, and 1144. These steels contain sulfur and may contain lead. These two elements will create low melting temperature constituents that will cause cracks. The machinability of carbon steel containing up to about 0.5% carbon is improved by the addition of sulfur. Most resulfurized steels contain 0.08 to 0.13% sulfur, though some alloys allow sulfur content as high as 0.35%. The sulfur combines with manganese to form manganese sulfide (MnS) inclusions within the steel.
