Abstracts

According to our (Global Info Research) latest study, the global Retail IoT Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Retail IoT software provides assistance with configuring, managing, and monitoring internet of things (IoT) devices being used throughout a retail environment. Smart technology allows retail managers and store owners to optimize resource usage, reduce costs, and improve conditions for employees and customers, while generating valuable data related to store operations and visitors. Retail IoT solutions may include unique hardware or assets that are specially designed for use in these areas. In some cases, these IoT solutions sync with other connected devices that are preconfigured for IoT or that are connected using third-party sensors.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
