Retail lighting systems are lighting solutions specifically designed for retail environments. They aim to enhance merchandise display, optimize customer experience, and strengthen brand image through scientific light layout and intelligent control technology. These systems typically integrate multiple lighting types (such as ambient light, accent light, and decorative light), intelligent dimming control, color temperature adjustment, and energy consumption monitoring. They are suitable for various retail scenarios, including supermarkets, specialty stores, and shopping malls. Retail lighting systems address the pain points of traditional lighting, such as high energy consumption, poor display effects, and high maintenance costs. Through precise optical design and intelligent control, they not only improve merchandise attractiveness and customer dwell time but also significantly reduce energy consumption and operating costs, making them an important component of retail digital transformation. The average price of this product is approximately \$200 per unit, with global sales of approximately 44.25 million units.
