Abstracts

The global Retail Self-checkout Terminals market size is expected to reach \$ 2364 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

Retail Self-checkout Terminals let customers scan items and pay for their purchases without the help of store employees. They are an alternative to the traditional cashier-staffed checkout. The customer performs the job of the cashier themselves, by scanning and applying payment for the items. Self-checkout systems can help retailers save cost while delivering a better customer experience. In developed countries such as Europe and the United States, Self-checkout Kiosk is very common, but in developing countries such as China, the development is accelerating. Especially with the popularity of mobile payment, this checkout method has become more easily accepted by people.

In 2025, global Retail Self-checkout Terminals sales reached approximately 463.29 k units, with an average global market price of around US\$ 3,341 per unit. The single-line production capacity is about 2 k unit, and the industry gross profit margin is about 28%.

The global retail self-checkout terminals market is experiencing rapid growth, driven by technological advancements, changes in consumer behavior, and the need for greater operational efficiency in retail environments.

Post-Pandemic Demand: The COVID-19 pandemic accelerated the shift toward contactless solutions, with consumers preferring minimal human interaction to reduce health risks. Self-checkout terminals offer a safer, contactless alternative to traditional cashier systems, contributing to increased adoption.

Autonomous Stores: Retailers are increasingly experimenting with fully autonomous stores (e.g., Amazon Go), where self-checkout terminals play a critical role in the move toward cashierless shopping experiences.

AI and Machine Learning Integration: Modern self-checkout systems are being equipped with AI and machine learning algorithms to enhance item recognition, detect potential theft, and improve overall checkout accuracy. Advanced AI can identify unscanned items, making the checkout process smoother and more secure.

Facial Recognition and Biometrics: Some retailers are incorporating facial recognition and biometric systems to provide personalized experiences and streamline the payment process. These technologies are also being used to prevent fraud and enhance security. Global key manufacturers of Retail Self-checkout Terminals include NCR Voyix, Toshiba, Diebold Nixdorf, Fujitsu, SUNMI, etc. Global top five manufacturers hold a share about 79%. North America is the largest market of Retail Self-checkout Terminals, holds a share over 40%. In terms of product, the Cashless Self-checkout Terminals hold a larger segment, with a share over 50%. And in terms of application, the largest application is Supermarkets & Hypermarkets, with a share of over 65%.
