Abstracts

According to our (Global Info Research) latest study, the global Retatrutide market size was valued at US\$ 1418 million in 2025 and is forecast to a readjusted size of US\$ 4557 million by 2032 with a CAGR of 17.4% during review period.

Retatrutide is a clinical-stage, multi-agonist peptide drug candidate targeting GLP-1, GIP, and glucagon receptors and is being developed for obesity, metabolic syndrome, and type 2 diabetes, with early data demonstrating substantial potential in weight reduction and metabolic improvement. As the product has not received marketing approval, no commercial production or sales existed in 2025; global commercial capacity is effectively zero. Limited quantities of GMP-grade API were manufactured for clinical studies?estimated at 3.2 kg?while research-grade peptide supplied to academic and preclinical users totaled an estimated 38 kg. With research-grade Retatrutide priced at approximately USD 340 per mg (USD 340,000 per g), the research-use market in 2024 is valued at USD 1.292 billion; GMP-grade API, estimated at USD 27,000 per gram, adds approximately USD 86.4 million, yielding a total addressable 2025 market (research + clinical materials) of USD 1.378 billion. Upstream inputs include protected amino acids, solid-phase peptide synthesis resins, coupling reagents, purification media, and analytical systems, while downstream demand arises from the originator company, clinical research sites, CRO/CDMO partners, and academic metabolic-disease laboratories. Given accelerating global demand for GLP-1-based therapies and sustained expansion in obesity treatment, Retatrutide holds substantial future commercial potential and is expected to drive significant growth across peptide manufacturing, sterile-fill capacity, and medical weight-management ecosystems upon approval.
