Retina is a layer of nerve tissue lining the back of the eye. Retina receives light and convert it into neural signals, and send these signals to the brain for visual recognition. The central part of the retina is known as macula, which is responsible for central vision. The remaining tissue outside the macula is responsible for peripheral vision. There are many types of retinal diseases.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs.
