## Abstracts

Retinal Vascular Occlusion (RVO) is the build-up of blood or other fluids in the retina of the eye, which prevents it from properly filtering light caused by the blood clot.

According to our (Global Info Research) latest study, the global Retinal Vascular Occlusion market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The Americas account for a significant market share owing to high expenditure on the health care, especially, of the U.S. and Canada. Additionally, the greater number of ophthalmology procedures due to greater healthcare penetration in the U.S. and Canada drives the retinal vascular occlusion market. The high concentration of the major hospitals in the developed countries of this region coupled with good reimbursement rates is adding fuel to the market growth. Moreover, the large share of ophthalmology procedures, especially, the retinal vascular occlusion surgery treatment in the returns of hospitals favors the market. The large number of pharmaceutical companies in the U.S. is also a cause for the faster development of retinal vascular occlusion market in the US. The high development of the microsurgery field in developed regions such as the U.S. and Europe is a strong driver of the market.
