Abstracts

Indwelling needles, also called trocars, can remain in blood vessels for 72-96 hours (depending on factors such as different vascular conditions, drug properties, and patient conditions). It is composed of a stainless steel puncture guide needle core, a soft cannula, a plastic needle seat and other components. During puncture, the outer cannula and needle core are inserted into the blood vessel together. After the cannula is inserted into the blood vessel, the needle core is withdrawn, leaving only the soft outer cannula in the blood vessel for infusion.
