A reusable air-fed suit is a specialized protective garment designed to shield wearers from hazardous environments by providing a continuous supply of clean, breathable air from an external source, such as a compressed air tank or air line. These suits are constructed from durable, chemical-resistant materials and feature sealed or semi-sealed designs to prevent contamination from airborne particulates, gases, or liquids. They are categorized by protection level: Type 1c gas-tight suits offer full encapsulation and airtight seals for high-risk scenarios involving toxic gases or liquids (e.g., chemical spills, industrial cleaning), often equipped with alarms to monitor airflow and CO₂ levels; Type 2 non-gas-tight suits provide protection against liquid chemicals and aerosols with the same air-fed system but without full gas-tight seals, suitable for environments like paint spraying or pharmaceutical manufacturing. Reusable by design, these suits are engineered for multiple uses after proper decontamination and maintenance, balancing safety, durability, and cost-effectiveness in industrial, emergency response, and hazardous material handling contexts.
