Abstracts

According to our (Global Info Research) latest study, the global Reusable Logistics Packaging Tracking System market size was valued at US$ 1399 million in 2025 and is forecast to a readjusted size of US$ 2778 million by 2032 with a CAGR of 10.0% during review period.

A Reusable Logistics Packaging Tracking System is an integrated hardware and software solution used to identify, locate and manage reusable transport packaging such as pallets, crates, totes, roll cages, racks, drums and intermediate bulk containers throughout repeated logistics cycles.

The system may use barcodes, QR codes, passive RFID, BLE, UWB, GPS, cellular communication or ambient IoT technology. Core functions include asset registration, dispatch and return records, inventory visibility, dwell-time analysis, cycle counting, loss alerts, packaging balances and system integration.

The scope includes tracking tags and sensors supplied as part of a system, readers, gateways, cloud or on-premise software, data connectivity, implementation and directly related subscription revenue.

Reusable packaging bodies, general pooling fees, cleaning, repair, reverse logistics, disposable shipment trackers and general warehouse-management systems are excluded.

The 2025 ASP is US$32,000 per unit, global sales volume is approximately 42,500 units, and the estimated average gross margin is approximately 44%.

The upstream chain includes RFID chips, durable labels, BLE and UWB modules, GPS and cellular modules, batteries, antennas, readers, gateways and cloud infrastructure. Midstream activities include tracker design, software development, asset-data configuration, reader deployment, system integration, testing and data-platform operation. Downstream users mainly include packaging poolers, manufacturers, retailers, food and beverage companies, automotive suppliers, logistics companies, pharmaceutical companies and e-commerce operators.

The market is moving from spreadsheet- and barcode-based packaging records toward automated asset-level visibility. Barcode and QR systems remain important for small or controlled loops, while RFID, BLE and ambient IoT are expanding in high-volume and multi-site packaging networks.

Reusable packaging creates value only when the asset can be returned and reused enough times. Poor visibility can cause pallets, crates and racks to remain at customer sites, become mixed with third-party assets or disappear from the network, increasing replacement purchases and emergency transportation.

Passive RFID remains one of the most scalable technologies for large packaging pools. Multiple tagged crates or pallets can be identified simultaneously at warehouse doors, production lines or vehicle-loading points without scanning each asset individually.

Active tracking is primarily used for higher-value packaging and less-controlled supply chains. BLE, GPS, cellular and LPWAN trackers provide location updates between fixed checkpoints and can generate alerts for unexpected movement, prolonged dwell time or departure from an approved route.

Ambient IoT is creating a new middle category between passive RFID and battery-powered GPS. Battery-free Bluetooth tags can provide more frequent data than traditional scan-based systems while reducing battery-replacement and maintenance requirements.

Packaging-management software is developing beyond simple quantity balances. New platforms support individual asset histories, automated rental charges, trip management, geofence transactions, condition data, customer portals and integration with ERP, WMS and transport systems. TrackOnline’s current enterprise functionality includes IoT and RFID plug-ins, automatic transfers, anomaly detection, trip management and rental calculations.

Pooling companies are integrating tracking directly into their reusable-packaging service. CHEP uses IoT-based track-and-trace solutions across reusable pallets and containers, while ORBIS SmartTrak360 provides inventory, in-transit and transaction visibility for packaging pools.

Tracking data is increasingly used for asset-pool optimization rather than only loss prevention. Companies can identify excess inventory, shortages, slow-return locations and abnormal cycle times, allowing packaging to be repositioned before production or delivery is disrupted.

Condition monitoring is expanding in food, pharmaceutical and high-value industrial supply chains. Temperature, humidity, shock, vibration, door status and fill-level data can be associated with the reusable packaging asset and the goods carried inside it.

Regulatory reporting is strengthening demand for verifiable reuse data. European reuse requirements and industry traceability rules increase the need to identify packaging, record trips and demonstrate that assets are circulating within an organized reuse system.

Food and beverage applications require large quantities of crates, pallets, trays, kegs and bulk liquid containers. These assets move through manufacturers, distributors, retailers, restaurants and cleaning centers, creating strong demand for automated receipt, return and sanitation records.

Automotive manufacturing is another major application. Customized racks, component trays and stillages are relatively expensive, and shortages can interrupt just-in-time production. Tracking systems help monitor assets across assembly plants, component suppliers and external logistics providers.

Report Scope

This report is a detailed and comprehensive analysis for global Reusable Logistics Packaging Tracking System market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with

+357 96 030922

market share estimates of some of the selected leaders for the year 2025, are provided.

Key Features:

Global Reusable Logistics Packaging Tracking System market size and forecasts, in consumption value ($ Million), sales quantity (K Units), and average selling prices (US$/Unit), 2021-2032

Global Reusable Logistics Packaging Tracking System market size and forecasts by region and country, in consumption value ($ Million), sales quantity (K Units), and average selling prices (US$/Unit), 2021-2032

Global Reusable Logistics Packaging Tracking System market size and forecasts, by Type and by Application, in consumption value ($ Million), sales quantity (K Units), and average selling prices (US$/Unit), 2021-2032

Global Reusable Logistics Packaging Tracking System market shares of main players, shipments in revenue ($ Million), sales quantity (K Units), and ASP (US$/Unit), 2021-2026

The Primary Objectives in This Report Are:

To determine the size of the total market opportunity of global and key countries

To assess the growth potential for Reusable Logistics Packaging Tracking System

To forecast future growth in each product and end-use market

To assess competitive factors affecting the marketplace

This report profiles key players in the global Reusable Logistics Packaging Tracking System market based on the following parameters - company overview, sales quantity, revenue, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include CHEP, Tosca, ORBIS Corporation, Rehrig Pacific Company, Utz Group, Cabka N.V., Wiliot,

TrackOnline, Sensolus, Pozyx, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Reusable Logistics Packaging Tracking System market is split by Type and by Application. For the period 2021-2032, the growth among segments provides accurate calculations and forecasts for consumption value by Type, and by Application in terms of volume and value. This analysis can help you expand your business by targeting qualified niche markets.
