Abstracts

Electronic identification animal ear tags approved for livestock identification are passive tags. They have no battery or power source of their own. Each tag contains a transponder that is activated when introduced into an electromagnetic field produced by an RFID reader. When activated, it will send the transponder's unique chip number to the reader which in turn sends it to the software contained in a computer, electronic scale head or PDA, etc. The unique transponder chip number contained in each ear tag is also printed on the outside of the tag.
