Reusable ultrasonic blades are high-end medical devices designed for surgical operations, using ultrasonic high-frequency vibration technology to achieve soft tissue cutting, coagulation and separation. Unlike disposable blades, this type of blade is made of durable materials and can be used multiple times after strict disinfection and maintenance, thereby reducing surgical costs and reducing the waste of medical resources. Its design focuses on performance stability and durability, and can maintain efficient energy transfer and precise operation capabilities during multiple uses. Reusable ultrasonic blades are widely used in minimally invasive surgery, open surgery and other scenarios, but they have high requirements for cleaning, disinfection and maintenance to ensure safety and surgical results.
