Revenue AI platforms use AI agents to execute key sales-related activities that accelerate productivity for revenue outcomes. The AI agents make decisions or recommend next steps based on revenue intelligence and customer interaction insights pulled from customer relationship management (CRM) software or other data sources such as communication, meeting tools, or public data. These task-specific AI agents turn these insights into action to help sales representatives handle tedious or routine tasks, and orchestrate workflows across revenue operations, sales, marketing, and customer success teams. Revenue AI platforms enable revenue operations (RevOps) and go-to-market (GTM) teams to enhance forecasting, pipeline management, coaching, and customer engagement. They achieve this by proactively prompting the right actions within organizational workflows, resulting in greater efficiency, consistency, and speed.
