Rhenium sheet, plate is mainly used as electrode materials in high-temperature, and harsh conditions, to produce electronic components, and ultra-high-temperature heater tube with metal evaporation in semiconductor, and electronics industry. The high-temperature heating parts need to work under special conditions compared with other materials, and pure Rhenium heatings have better electrical performance and longer life expectancy. These significant properties are more resistant to the harsh working atmosphere and preferred by the users. Rhenium foil is mainly used for chemical vapor phase deposition coating, and film (CVD), and physical vapor deposition (PVD) process, including hot-electron beam evaporation, low-temperature organic evaporation, atomic layer deposition (ALD), and metal-organic Optics product (MOCVD). Others can be used for manufacturing special parts in aerospace equipment.
