A Reverse Air Bag House Dust Collector is that uses reverse airflow to clean dust from fabric filter bags. During normal operation, dusty air passes through the filter bags, trapping dust particles on the outer surface of the bags. Periodically, a gentle reverse air stream is introduced, flowing in the opposite direction, causing the dust collected on the filter surface to dislodge and fall into a hopper for removal. Making it suitable for handling fine, sticky, or high-temperature dust in industries such as cement, steel, and power generation.
