Abstracts

The global Reverse-ester Type Methyltin Mercaptide market size is expected to reach \$ 172 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Reverse-ester type methyltin mercaptide is a high-performance subtype within the methyl tin stabilizer family. It is produced by reacting aqueous methyltin chloride with reverse-ester mercapto ester, and is termed 'reverse-ester' because of its ester structure. Compared with conventional methyltin mercaptide, it offers high-efficiency heat stabilization, better lubricity, and excellent initial color, making it especially suitable for high-speed extrusion, rapid forming, and the processing of pipes, fittings, profiles, and higher-performance PVC products.

The upstream of methyltin mercaptide is centered on tin ingot, isooctanol, and ethyl chloride, with disclosed data showing tin ingot accounts for roughly 40% of key raw-material purchases for a leading producer and is the most important price driver. The midstream includes synthesis of key intermediates such as mercapto ester and methyltin chloride, followed by final stabilizer manufacturing; companies with in-house intermediate production usually enjoy better cost control, consistency, and delivery reliability. Downstream demand comes mainly from rigid PVC pipes and fittings, profiles, boards, sheets, transparent packaging, bottles.

In 2025, global reverse-ester type methyltin mercaptide production reached approximately 10 Kilotons , with an average global market price is \$12,000 per ton.
