Reverse Osmosis Membrane Cleaner is a chemical substance specially used to clean the dirt on the surface and inside of the reverse osmosis membrane. It is divided into acidic cleaners and alkaline cleaners. Acidic cleaners are generally liquid or solid formulas with low pH values, usually between 2.5-3.5, and are mainly used to remove calcium carbonate and other types of inorganic scaling, such as metal hydroxides. Alkaline cleaners are liquid formulas with high pH values, usually around 11, and are mainly used to remove organic matter, sludge, and other particles attached to the membrane surface. The main function of reverse osmosis membrane cleaners is to clean system pollution, improve the desalination rate of reverse osmosis membranes, reduce the pressure difference between the first and second stages of the system, and extend the service life of the membrane. They are widely used in the field of industrial and commercial reverse osmosis membranes.
