Abstracts

The growth of the reverse osmosis membrane market can be attributed to the growing gap between water demand and supply. Water shortages, increasing government regulations on water quality, and growing demand for desalination in water-scarce areas are driving factors for the reverse osmosis membrane market. The Middle East and North Africa and the Asia-Pacific region have been identified as high-potential markets for reverse osmosis membrane materials, and due to the increased number of desalination plants and government investment in water purification plants, significant growth will be witnessed in the next five years. In terms of the value of the global reverse osmosis membrane market, the market share of thin film composite membranes is estimated to be the highest. Thin film composite membranes will become the fastest growing type of reverse osmosis membrane materials due to their high throughput and high salt rejection rate. These membranes can be used in RO desalination systems due to their broad pH and temperature resistance compared to cellulose-based membranes.

According to our (Global Info Research) latest study, the global Reverse Osmosis Membrane Composite Membrane market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
