## Abstracts

The rapid growth of the dairy industry and regulations The products used for water safety and filtration have greatly driven the membrane filtration market. In addition, as demand for quality products and the efficiency provided by membrane filtration technology continues to grow, so does the demand for membrane filtration for a variety of end uses. Reverse osmosis (RO) technology is used to remove harmful pollutants from water by increasing the pressure of the water through a semi-permeable membrane. This process usually removes minerals such as iron, fluorine, lead, salt, manganese and calcium. Reverse osmosis provides high efficiency in water purification; it can usually remove up to 99% of most mineral contaminants. Therefore, RO has witnessed a huge demand for water purification purposes.
