According to our (Global Info Research) latest study, the global Reverse Osmosis Watermaker market size was valued at US\$ 1660 million in 2025 and is forecast to a readjusted size of US\$ 2339 million by 2032 with a CAGR of 5.1% during review period.

The development trend of reverse osmosis watermakers is focused on improving efficiency, increasing capacity, and reducing energy consumption. Membranes are the heart of reverse osmosis systems, and advancements in membrane technology are continuously being made to improve water production rates, increase salt rejection, and extend membrane lifespan. Thin-film composite (TFC) membranes are widely used due to their high performance, but research is ongoing to develop even more efficient and durable membranes. Reverse osmosis is an energy-intensive process, and energy recovery systems are being incorporated into watermakers to reduce energy consumption. These systems capture and reuse the energy from the brine stream to pressurize the incoming seawater, thereby reducing the overall energy requirements of the system. Watermakers are being designed to be more compact and modular, allowing for easier installation and integration into various applications. This trend is driven by the need for portable and space-efficient water treatment solutions in industries such as marine, offshore, and remote locations.
