According to our (Global Info Research) latest study, the global Reverse Transcriptase market size was valued at USD 331 million in 2023 and is forecast to a readjusted size of USD 425 million by 2030 with a CAGR of 3.6% during review period.

Normally, DNA is transcribed, or copied, to RNA and then translated to protein. Reverse transcriptase copies RNA back to DNA. Think of it as a car moving down a one-way street. Normally traffic only moves in one direction. But then, someone from out of town is driving the opposite way! Reverse transcriptase drives the opposite way in molecular processes in cells, converting RNA back to DNA.

Thermo Fisher, Promega, Roche, Bio-Rad and Takara Bio are the main producers of Reverse Transcriptase, the top 3 hold nearly 40% of the whole market. North America is the main market, which holds about 40% of the global marketshare.
