The global Reverse Water Gas Shift Catalysts market size is expected to reach $ 631 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Reverse Water Gas Shift catalysts are catalytic materials specifically formulated to drive the reverse water-gas shift reaction, converting carbon dioxide and hydrogen into carbon monoxide-rich synthesis gas, a critical feedstock for downstream fuel and chemical synthesis. In 2025,global reverse water gas shift catalysts production reached approximately 7,915 ton, with an average global market price of around USD 50,000 per ton. A factory gross profit of USD 17,500 per ton with 35% gross margin. A single line full machine capacity production is around per line per year. The upstream is dependent on nickel and precious metals. The downstream demand is concentrated in e methanol and synthetic fuels. RWGS is paired with a subsequent reactor in sustainable aviation fuel production, the waste CO2 and green hydrogen are turn into CO, which is then synthesized into zero-emission jet fuel. China market is driven by massive green hydrogen proejcts. Germany, France, and the Netherlands market are driven by strict carbon pricing and sustainable aviation fuels.
