## Abstracts

The global Revision Bioimplants market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Revision Bioimplants are pre-hydrated in saline to eliminate idle OR time associated with cutting and soaking a traditional bone graft. The bioimplants are sterilized in saline rather than freeze-dried, to preserved the structural integrity of the graft and to avoid intraoperative graft fracture when reaming. Two distinct size options are available for unique revision scenarios: a small option designed to backfill metatarsal head voids and a large option design to bridge a larger gap and restore length. The bioimplants feature a flat-cut, cannulated designed to be used with a provided 1.6mm guidewire, MTP cup and cone reamers, and acorn reamer. Reamers are used for intraoperative shaping and graft site preparation, which may vary depending on revision scenario and surgeon-preference or technique.

This report studies the global Revision Bioimplants production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Revision Bioimplants, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
